Dear Customer,

Historically, Recyl has been using colouring additives in some of its products to help differentiate them (blue in QuickWash UV, green in QuickWash Solvant, red in QuickWash Booster and QuickWash Premium, orange in Flexo Circulation Cleaner).

Our more recent products have remained colourless (Quick Wash Flex, Clean Waterless for example), as these colouring additives have NO CLEANING ACTION. With regulations becoming more stringent, we moved years ago to the use of food compatible colouring additives, which were not necessarily stable over time in our cleaning mixtures: this raised questions over the quality of the cleaning product despite the complete absence of cleaning action of the colouring additives.

We therefore decided to **gradually eliminate these colouring additives** from our products: you'll notice in the coming weeks / months along our future productions that **our products will become transparent**.

Recyl guarantees 100% that the cleaning efficacy of its products is totally unaltered by this change. All other aspects (labeling, Safety Data Sheet, packaging, ...) remain unchanged.

We thank you in advance for your understanding with this "cosmetic" change which helps **Recyl becomes greener and more sustainable!**
